What is Scalar Wave Technolgy?

Introduction

I have given a lot of thought as to how I shall approach the following subject of SCALAR WAVES. This series of reports will change and perhaps differ in content as time goes on and we learn more on this fantastic claim. Scalar Wave Technology is said to be straight out of science-fiction, yet we can show Scalar Waves are a real technology and really exist as claimed. This is what we shall research and set out to demonstrate in the months to come. I would like to form a group to do just this and you can be a part. The findings shall be reported here and the information for a Hands on approach for all with interest to see. There is no cost or special requirement to become a part of this research group. All you will need is a true interest to know and find out for yourself. There is no book to go by so we will be looking into a true unknown and must write the log as we go. I am in hopes this adventure will open new doors to our understanding of nature and world of phenomena or should I say "EXTRAORDINARY SCIENCE."

If you are interested in embarking on this journey with me, write to me at the above address or call:

I have a national computer net where results can be entered and shared by the computer users in the group. It is called Cheyenne Mountain BBS, and can be reached by modem at the above number. (24 hours.) 1200 Baud max. It is a FOREM BBS with FNet (Crossnet, Moosenet) FidoNet will be added soon which will bring in to reach at least another 2,000 BBS's around the nation. If we can locate a Forem or Fido BBS in your local area then you can connect direct with us which means no long distance call to you.

Scalar Waves

Scalar is not a new term to physics as it stands alone. The definition of *scalar* as it is recognized by the scientific community today is:

*Quantity completely described by a number, such as a point on a scale, time, temperature, volume, mass, density; as such, it has magnitude, but no direction. A vector, by comparison, is a quantity having both magnitude and direction. (Examples: velocity, displacement, force) Scalars are added algebraically, vectors by geometric or trigonometric operations.*¹

This term, scalar, that I will be using fits the description of the construction of such a wave and hence Lt.Col Thomas E. Bearden, Ret. has coined the name for this particular set of wave. In physics terms the wave would fall under the category of 'Zero Point Energy.' Contrary to popular belief there are still many unknowns in the science and the world. Man tends to shove what he can not account for under the

carpet in hopes it will go away. This 'Dirt' so to speak which is slid under to carpet is termed *NOISE* to the scientific community. Man has been tuning out noise ever since the discovery of the electrons. The few who have stopped to study the noise since they have found it will not go away have put a label on such studies as *PARA*. To the scientific community, *PARA* has become the dirty four letter word. For what ever label is used, scalar seems to be the missing link or unfield between the so called Real world and the Para-normal world. Process between electrostatic, electromagnets and quants hold an intermarriage with each other. Each was discovered by the interrelation with each other. Hence Scalar also shares this same relationship plus accounts for the fringe areas of *NOISE* which ties such great but true differences together as a sort of unified field relation-

ship. So as not to confuse or darken the term "Unified Field Theory" I shall coin the term Unified for Scalar Waves and their related capabilities.

With the definition of Scalar defined I shall go to list some of the properties and abilities of the Scalar Waves as compared to the family of other known and accepted waves. These properties and abilities are what set Scalar Waves aside in a class all of their own and make them unique. When understood man will be able to do fantastic things that until now he could only dream of or classify as a miracle or Para-normal. The effects can be produced or generated by mechanical, electrical, atomic, biological or a combination of the above. All man needs to do is know how to manipulate the Wave to produce the desired effect needed.
